

## CASE STUDY **CALOR**

### **PROBLEM**

Calor Gas are a trusted provider of LPG gas in the UK since 1935. Calor reliably supply LPG and BioLPG for heating, cooking and energy across the whole of the United Kingdom. As a provider of gas, the business must ensure safety is its top priority.

Calor gas works across the UK need to run safely and efficiently which involves significant maintenance and monitoring of all sites. The challenge for Calor is find the right partner that can offer ATEX inspections and is qualified with CompEx certification, allowing the partner to work in the most hazardous environments.

### **SOLUTION**

Install Projects are proud to be one of the few CompEx certified installers and maintainers in the UK. This allows the team to safely offer full ATEX inspections at all Calor's sites.

The team maintain sites across the UK including the vast Fawley and Newbury locations. Calor trust Install Projects to complete regular inspections, maintain vital plant machinery and recommend changes or highlight concerns. In 2020, the team at Install Projects replaced several fire pumps at the Fawley site which are crucial for safety.

This is extremely dangerous as the upgrade must be completed in a "live" setting. The team also complete regular lives tests to ensure vital safety equipment is working to its optimal level.
