

CASE STUDY

GRACELANDS

PROBLEM

When Hampshire based leading groundworks and civil engineering contractors, Gracelands chose their new headquarters the building they selected needed a complete overhaul. The building was not fit for their team and requirements.

The new Gracelands building needed a complete refit and they had to start from scratch with new plumbing, air conditioning, heating system and electrical work. This was obviously a very daunting project.

OUTCOME

Install projects were selected to ensure the new location was exactly how Gracelands wanted it to be. The team at Install Projects designed and installed:

- A Complete Office Plumbing System
- Air Conditioning
- An Electrical Refit
- A New Underfloor Data Network
- A New Fire Alarm System
- An Improved Office Heating System

The appeal of the Install Project's proposal was their ability to design and complete this wide-ranging project in its entirety on budget and within the 12-week lead time.

Gracelands were incredibly impressed with the entire fit out completed by the team and paid special praise to the lighting design which offered them an airier and more spacious workplace for the Gracelands team.
